### 7. Declared performance/s:

#### Safety in case of fire (BWR 2)

Reaction to fire: Class A1  
Resistance to fire: Annex C2

$N_{Rk,s,fi} = \text{NPD}$ ;  $N_{Rk,p,fi} = \text{NPD}$

#### Mechanical resistance and stability (BWR 4)

Resistance to steel failure under tension loading: Annex C1  
Resistance to steel or polymer failure under shear loading: Annex C1  
Resistance to pull-out or concrete failure or polymer failure under tension loading (base material group a): Annex C1

$V_{Rk,pol} = \text{NPD}$

Resistance in any load direction without lever arm (base material group b, c, d): see appendix, especially annexes C16 - C45

Edge distance and spacing (base material group a): Annex B4  
Edge distance and spacing (base material group b, c, d): Annexes B5, B6  
Displacements under short-term and long-term loading: Annex C2

Durability: Annexes A3, B1, B2

### 8. Appropriate Technical Documentation and/or Specific Technical Documentation: -

The performance of the product identified above is in conformity with the set of declared performance/s. This declaration of performance is issued, in accordance with Regulation (EU) No 305/2011, under the sole responsibility of the manufacturer identified above.

Signed for and on behalf of the manufacturer by:

Dr.-Ing. Oliver Geibig, Managing Director Business Units & Engineering  
Tumlingen, 2023-01-17

Jürgen Grün, Managing Director Chemistry & Quality

This DoP has been prepared in different languages. In case there is a dispute on the interpretation the English version shall always prevail.

The Appendix includes voluntary and complementary information in English language exceeding the (language-neutrally specified) legal requirements.

## Specific part

### 1 Technical description of the product

The fischer frame fixing in the range SXR 8, SXRL 8, SXR 10, SXRL 10 and SXRL 14 is a plastic anchor consisting of a plastic sleeve made of polyamide and an accompanying specific screw of galvanised steel, of galvanised steel with an additional organic layer or of stainless steel.

The plastic sleeve is expanded by screwing in the specific screw which presses the sleeve against the wall of the drilled hole.

The product description is given in Annex A.

### 2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchors of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

### 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Safety in case of fire (BWR 2)

| Essential characteristic | Performance   |
|--------------------------|---------------|
| Reaction to fire         | Class A1      |
| Resistance to fire       | See Annex C 2 |

#### 3.2 Mechanical resistance and stability (BWR 4)

| Essential characteristic                                                                 | Performance             |
|------------------------------------------------------------------------------------------|-------------------------|
| Resistance to steel failure under tension loading                                        | See Annex C 1           |
| Resistance to steel failure under shear loading                                          | See Annex C 1           |
| Resistance to pull-out or concrete failure under tension loading (base material group a) | See Annex C 1           |
| Resistance in any load direction without lever arm (base material group b, c, d)         | See Annexes C 16 – C 45 |
| Edge distance and spacing (base material group a)                                        | See Annex B 4           |
| Edge distance and spacing (base material group b, c, d)                                  | See Annex B 5 and B 6   |
| Displacements under short-term and long-term loading                                     | See Annex C 2           |
| Durability                                                                               | See Annex B 1 and B 2   |

#### **4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base**

In accordance with European Assessment Document EAD 330284-00-0604 the applicable European legal act is: 97/463/EC.

The system to be applied is: 2+

The following standards and documents are referred to in this European Technical Assessment:

- EOTA European Assessment Document EAD 330284-00-0604, edition December 2020: Plastic anchors for redundant non-structural systems in concrete and masonry
- EOTA Technical Report TR 051, Edition April 2018: Recommendations for job site tests of plastic anchors and screws
- EOTA Technical Report TR 064, Edition May 2018: Design of plastic anchors in concrete and masonry
- EN 206:2013+A1:2016: Concrete – Specification, performance, production and conformity
- EN 771-1:2011+A1:2015: Specification for masonry units – Part 1: Clay masonry units
- EN 771-2:2011+A1:2015: Specification for masonry units – Part 2: Calcium silicate
- EN 771-3:2011+A1:2015: Specification for masonry units – Part 3: Aggregate concrete masonry units (dense and lightweight aggregates)
- EN 771-4:2011+A1:2015: Specification for masonry units – Part 4: autoclaved aerated concrete masonry units
- EN 998-2:2010: Specification for mortar for masonry - Part 2: Masonry mortar
- EN 1993-1-4:2006 + A1:2015: Eurocode 3: Design of steel structures – Part 1-4: General rules - Supplementary rules for stainless steels
- EN 12602:2016: Prefabricated reinforced components of autoclaved aerated concrete
- EN ISO 4042:2018: Fasteners – Electroplated coating systems

## SXR

## SXRL (e.g. with $h_{nom2}$ )

### Legend

- $h_{nom}$  = Overall plastic anchor embedment depth in the base material
- $h_1$  = Depth of drill hole to deepest point
- $d_0$  = Nominal drill hole diameter
- $h$  = Thickness of member (base material)
- $t_{fix}$  = Thickness of fixture and / or non-load-bearing layer

Figures not to scale

### fischer frame fixing SXR / SXRL

**Product description**  
Installed anchor

**Annex A 1**

Appendix 3 / 57

## Anchor sleeves – flat collar versions of SXR and SXRL

### SXR-version

Marking:

Brand

Anchor type

Size

e.g.  SXR 10x80

e.g.  SXRL 10x200

### SXRL-version

Countersunk sleeve version also available for both versions

\*see Table A3.1  
and Annex B 7

### Special Screws

#### Countersunk screw

#### Hexagonal screw with washer

#### Hexagonal screw

- 1) Additional marking for the special screw, stainless steel version: e.g. "A4" or "R" or "A2".
- 2) Internal driving feature for TX bit is optional for hexagonal head screw.
- 3) Optional additional version with underhead ribs.

1) Only valid for flat collar version.

2) Marking optional.

3) Additional  $h_{nom}$  for base material perforated clay brick S9 (see Annex C 32 and C 43) and autoclaved aerated concrete (see Annex C 44 and C 45).

4) Additional  $h_{nom}$  for base material perforated clay brick S8 (see Annex C 32 and C 43).

**Table A3.2: Materials**

| Name          | Material                                                                                                                                                                                                              |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Anchor sleeve | - Polyamide, PA6, colour grey                                                                                                                                                                                         |
| Special screw | - Galvanised steel gvz with Zn5/Ag or Zn5/An in accordance with EN ISO 4042<br><b>or</b>                                                                                                                              |
|               | - Galvanised steel gvz with Zn5/Ag or Zn5/An in accordance with EN ISO 4042 with additional organic layer (Zn5/Ag/T7 or Zn5/An/T7, respectively) in three layers (total layer thickness $\geq 6 \mu m$ )<br><b>or</b> |
|               | - Stainless steel "A2" of corrosion resistance class CRC II in accordance with EN 1993-1-4<br><b>or</b>                                                                                                               |
|               | - Stainless steel "A4" or "R" of corrosion resistance class CRC III in accordance with EN 1993-1-4                                                                                                                    |

Appendix 5 / 57

## Specifications of intended use

### Anchorage subject to:

- Static and quasi-static loads.
- Redundant non-structural systems.

### Base materials:

- Reinforced or unreinforced concrete without fibres, strength classes  $\geq$  C12/15 (base material group “a”), as per EN 206, see Annex C 1 and C 3.
- Thin-walled concrete components (e.g. weather shells) strength classes  $\geq$  C12/15 (base material group “a”), as per EN 206, thickness  $\geq$  40 mm, see Annex C 1 and C 3.
- Pre-stressed compacted normal weight concrete core slabs  $\geq$  C45/55 (base material group “a”) as per EN 206, see Annex C 1 and C 3.
- Solid brick masonry (base material group “b”) as per EN 771-1, EN 771-2 or EN 771-3, see Annex C 3 – C 4, C 17 – C 26.

Note: The characteristic resistance is also valid for larger brick sizes and higher compressive strength of the masonry unit – all characteristic resistance values of solid brick masonry are valid for installation in the stretcher and in the header side of the bricks.

- Hollow or perforated brick masonry (base material group “c”), as per EN 771-1, EN 771-2 or EN 771-3, see Annex C 5 – C 15, C 26 – C 43: installation in stretcher side  
see Annex C 8, C 43: installation in header side.
- Reinforced autoclaved aerated concrete (base material group “d”), as per EN 12602, and unreinforced autoclaved aerated concrete (base material group “d”) as per EN 771-4, see Annex C 15, C 44 and C 45.
- Mortar strength class of the masonry  $\geq$  M2,5 in accordance with EN 998-2.
- For other comparable base materials of the base material group “a”, “b”, “c” and “d” the characteristic resistance of the anchor may be determined by job site tests in accordance with TR 051.

### Temperature Range:

SXR 8 and 10 and SXRL 8

- c: - 40 °C to 50 °C (max. short term temperature + 50 °C and max long term temperature + 30 °C)
- b: - 40 °C to 80 °C (max. short term temperature + 80 °C and max long term temperature + 50 °C)

SXRL 10 and 14

- c: - 20 °C to 50 °C (max. short term temperature + 50 °C and max long term temperature + 30 °C)
- b: - 20 °C to 80 °C (max. short term temperature + 80 °C and max long term temperature + 50 °C)

**Intended use**  
Specifications

**Annex B 1**

Appendix 6 / 57

## Use conditions (Environmental conditions):

- Structures subject to dry internal conditions: Special screw made of zinc coated steel or stainless steel.
- The specific screw made of galvanised steel or galvanised steel with an additional organic layer may also be used in structures subject to external atmospheric exposure, if the area of the head of the screw is protected against moisture and driving rain after mounting of the fixing unit in this way, that intrusion of moisture into the anchor shaft is prevented. Therefore there shall be an external cladding or a ventilated rainscreen mounted in front of the head of the screw and the head of the screw itself shall be coated with a soft plastic, permanently elastic bitumen-oil-combination coating (e.g. undercoating or body cavity protection for cars).
- Structures subject to external atmospheric exposure (including industrial and marine environment) and to permanently damp internal condition, if no particular aggressive conditions exist: Special screw made of stainless steel of corrosion resistance class CRC III.

Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

## Design:

- The anchorages are to be designed in accordance with TR 064 under the responsibility of an engineer experienced in anchorages and concrete/masonry work.
- Verifiable calculation notes and drawings shall be prepared taking account of the loads to be anchored, the nature and strength of the base materials and the dimensions of the anchorage members as well as of the relevant tolerances. The position of the anchor is indicated on the design drawings.

## Installation:

- Hole drilling by the drilling method in accordance with Annex C 1 for base material group “a” and Annex C 17 - C 45 for base material group “b”, “c” and “d”.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Installation temperature from SXR 8/10, SXRL 8 and SXRL 14: - 5 °C to + 40 °C  
SXRL 10: - 20 °C to + 40 °C
- Exposure to UV due to solar radiation of the not protected anchor by rendering ≤ 6 weeks.
- No ingress of water in the borehole at temperatures < 0 °C.

**Table B3.1: Installation parameters**

| Anchor type                                                                 |                   |        | SXR 8 | SXRL 8 | SXR 10                    | SXRL 10                   | SXRL 14 |

|                                                                             | $h_{1,5}^{4)}$    | ≥ [mm] | -     | -      | -                         | 190                       | -       |
| Diameter of clearance hole in the fixture                                   | $d_f$             | ≤ [mm] | 8,50  | 9,50   | 10,50/12,50 <sup>5)</sup> | 10,50/12,50 <sup>5)</sup> | 15,40   |

1) See Annex A 1.

2) For base material group "c": If the embedment depth is higher than  $h_{nom}$  given in the Table B3.1, job site tests have to be carried out in accordance with TR 051.

3) Only valid for base material perforated clay brick S9 (see Annex C 32 and C 43) and autoclaved aerated concrete (see Annex C 44 and C 45).

4) Only valid for base material perforated clay brick S8 (see Annex C 32 and C 43).

5) See Table C2.1.

**Table B3.2: Assignment of  $h_{nom}$ ,  $l_d$  and  $t_{fix}$  for use in thin concrete slabs (e.g. weather resistant shells of external wall panels) and pre-stressed concrete core slabs**

| Anchor type                                                                        |  | SXR 10 / SXRL 10 |      |                      |                |

1) Intermediate values by linear interpolation.

2) Values valid for reinforced concrete.

Please note: Values for non-reinforced concrete are  $h_{min} = 110$  mm and  $c_{min} = s_{min} = 80$  mm for concrete  $\geq C16/20$  and  $c_{min} = s_{min} = 110$  mm for concrete C12/15.

3) Please note: Values for non-reinforced concrete are  $h_{min} = 110$  mm,  $c_{min} = 100$  mm,  $s_{min} = 80$  mm for concrete  $\geq C16/20$  and  $c_{min} = 140$  mm,  $s_{min} = 110$  mm for concrete C12/15.

4) Also valid for thin concrete slabs and prestressed hollow concrete core slabs see Table B3.3  $h \geq 40$  mm,  $h_{nom} = 50$  mm to 59 mm.

Fixing points with a spacing  $a \leq s_{cr}$  are considered as a group with a maximum characteristic resistance  $N_{RK,p}$  according to Table C1.2. For a spacing  $a > s_{cr}$  the anchors are considered as single anchors, each with a characteristic resistance  $N_{RK,p}$  according to Table C1.2.

<sup>1)</sup> See Table C45.1.

**Scheme of edge distances and spacing see Annex B 5**

**fischer frame fixing SXR / SXRL**

**Intended use**

Minimum thickness of member, edge distances and spacing for use in unreinforced and in reinforced autoclaved aerated concrete

**Annex B 6**

Appendix 11 / 57

## Installation instructions

1. Drill the bore hole according to Table B3.1 using the drilling method described in the corresponding Annex C.

2. Base material group „a“, „b“, „d“: Remove dust from borehole.

3. Insert anchor (screw and sleeve) by using a hammer until the collar of the plastic sleeve is flush with the surface of the fixture. In case of using brick S8 (see Table A3.1 footnote 4), additional embedment depths  $h_{nom}$  150mm or  $h_{nom}$  180 mm may be taken by measuring the anchorage depth and the fixture height. The corresponding length of anchor should be taken.

4. The screw is screwed-in until the head of the screw touches the sleeve. The anchor is correctly mounted, when the head of the screw fits tight on the surface and cannot be screwed-in any further.

5. Correctly installed anchor in concrete.

6. Correctly installed anchor in hollow or perforated masonry.

<sup>1)</sup> Valid for all ranges of temperatures.

<sup>2)</sup> Intermediate values by linear interpolation.

**Table C2.3: Values under fire exposure in concrete C20/25 to C50/60 in any load direction (no permanent centric tension load, shear load without lever arm) fastening of façade systems**

| Anchor type                | Fire resistance class | $F_{Rk,fi,90}$ | $\gamma_{M,fi}$ <sup>1)</sup> |
|----------------------------|-----------------------|----------------|-------------------------------|
| SXR 10 / SXRL 10 / SXRL 14 | R 90                  | 0,8 kN         | 1,0                           |

<sup>1)</sup> In absence of other national regulations.

If one-side fire load, see table B4.1 for edge distance.

In case of fire attack from more than one side the minimum edge distance shall be  $c \geq 300$  mm,  $c \geq 2 \cdot h_{ef}$ ; the bigger value is decisive.

**fischer frame fixing SXR / SXRL**

#### Performances

Displacements under tension and shear loading in concrete, masonry and autoclaved aerated concrete, fire resistance in concrete

#### Performances

Summary of base materials hollow or perforated bricks and autoclaved aerated concrete

**Annex C 15**

Appendix 27 / 57

Footnotes for Annex C 17 – C 43

- 1) In absence of other national regulations.
- 2) Only valid for temperature range 30/50 °C.
- 3) Only valid for edge distance  $c \geq 150$  mm; intermediate values by linear interpolation.
- 4) Only valid for edge distance  $c \geq 200$  mm; intermediate values by linear interpolation.
- 5) Only valid for edge distance  $c \geq 150$  mm for temperature range 30/50° C; intermediate values by linear interpolation.
- 6) Only valid for edge distance  $c \geq 200$  mm for temperature range 30/50° C; intermediate values by linear interpolation.
- 7) Only valid for spacing  $s \geq 250$  mm
- 8) Only valid for spacing  $s \geq 250$  mm for temperature range 30/50° C
- 9) The characteristic resistance  $F_{Rk}$  of lower  $h_{nom}$  can also be taken for next higher  $h_{nom}$ .
- 10) No performance assessed.
- 11) The characteristic resistance  $F_{Rk}$  is taken from the lower compressive strength of the masonry unit.
- 12) The characteristic resistance  $F_{Rk}$  is only valid for shear loads  $V$  without lever arm, for single anchors with  $s_{min} \geq 250$  mm in the header side.
- 13) Only valid for  $h_{min} \geq 248$  mm.
- 14) The compressive strength of the single brick must not be less than 80% of the mean compressive strength.
- 15) The lowest load of two consecutive embedment depths may be used for the intermediate embedment depths.
- 16) If the compressive strength of the base material according to EN 771-1, EN 771-2 or EN 771-3 on the construction side is lower than the mean compressive strength given in the tables according to Annex C 17 – C 43,  $F_{Rk}$  shall be calculated as follows:

$$F_{Rk, construction\ site} = F_{Rk}\ (Table\ C.\ "X") \cdot \frac{Mean\ compressive\ strength\ (construction\ site)}{Mean\ compressive\ strength\ (Table\ C.\ "X")}$$

Detailed design of header side and stretcher side

Possible position of the anchor in the header side of brick e.g. S9 (see Annex C 8, C 43)

Possible Position of the anchor in the stretcher side of brick e.g. S9 (see Annex C 8, C 32)

**Table C17.1: Characteristic resistance  $F_{Rk}^{16)}$  in [kN] for use in solid masonry - base material group “b”**

1) In absence of other national regulations.

2) Only valid for temperature range 30/50° C.

3) The characteristic resistance  $F_{Rk}$  for SXRL 10 also valid for installation in the stretcher and in the header side of the blocks.

4) Values valid for member thickness  $h_{min} \geq 175$  mm.

5) Only valid for edge distance  $c_{1,min} \geq 100$  mm and  $c_{2,min} \geq 150$  mm.

6) Only valid for edge distance  $c_{1,min} \geq 120$  mm  $c_{2,min} \geq 180$  mm.

7) Only valid for spacing  $s_{1,min} \geq 240$  mm and  $s_{2,min} \geq 250$  mm

8) No performance assessed.
